

Top-Left Origin Demo

(0, 0) is the top-left corner. y increases downward.

rect(72, 100, 468, 60) â top-left corner at (72, 100)

This paragraph uses fitTextflow with a rect whose y-coordinate (180) is measured from the top of the page. The library transparently converts all coordinates to PDF space so you can think entirely in top-left terms.

API	TopLeft meaning of y
placeText(x, y)	y = distance from top of page
moveTo / lineTo	y = distance from top of page
rect(x, y, w, h)	y = top edge of rectangle
fitTextflow(rect)	rect->y = top of text area
fitRow(cursor)	cursor rect->y = top of table area
placeImage(rect)	rect->y = top of image area
