

Top-Left Origin Demo

(0, 0) is the top-left corner. y increases downward.

`rect(72, 100, 468, 60)` â top-left corner at (72, 100)

This paragraph uses `fit_textflow` with a `rect` whose y-coordinate (180) is measured from the top of the page. The library transparently converts all coordinates to PDF space so you can think entirely in top-left terms.

API	TopLeft meaning of y
<code>place_text(x, y)</code>	y = distance from top of page
<code>move_to / line_to</code>	y = distance from top of page
<code>rect(x, y, w, h)</code>	y = top edge of rectangle
<code>fit_textflow(rect)</code>	rect.y = top of text area
<code>fit_row(cursor)</code>	cursor rect.y = top of table area
<code>place_image(rect)</code>	rect.y = top of image area
